## SALTO MOBILE SOLUTIONS

mean more convenience and more security.

**Using SALTO's developed JustIN apps, SALTO's two mobile solutions make it easy and secure to use smartphones as a part of your access control solution that brings real-life usability and flexibility to access control.**

SALTO'S JustIN Mobile Key app allows users to use their BLE-enabled smartphone to securely receive their keys online, anytime and anywhere, and then access doors directly with their phone. An alternative solution is JustIN mSVN (mobile SALTO Virtual Network) that permits extending or changing access rights instantly and remotely Over The Air (OTA) using SALTO's mSVN app for NFC-enabled phones.

Working with SALTO's new ProAccess SPACE software, both of these mobile solutions easily and flexibly bring better security and usability to end-users as well as system managers.

- End-users gain convenience and productivity without sacrificing security.
- Facility managers distinguish their property with cost-effective solutions that clients truly value.

**SALTO**  
inspired access
